Tel Aviv, Israel | +972 546965957 | giladshekalim@gmail.com | [LinkedIn](#) | [GitHub](#)

I'm a software engineering student in my final year at Afeka Academic College of Engineering, with a genuine passion for building things that work well and learning fast along the way, most recently channeling that into AI engineering and autonomous agent development. Always looking for the next layer to dig into. I thrive in collaborative environments, take ownership seriously, and bring both technical depth and a structured approach to whatever I'm working on.

Professional Experience and Skills

2025 – present: **Agentic AI & Automation Engineer** at Elyonx

- Engineered autonomous AI agents and orchestration workflows using LLMs to automate complex, multi-step decision-making processes.
- Developed and optimized scalable automation pipelines within the MAGISTER project, improving system efficiency, data processing, and task execution.
- Applied foundational machine learning and agentic frameworks to dynamic problem-solving, establishing a strong technical background for advanced AI research.
- Core tools & technologies: Python, PyTorch, NumPy, Jupyter, LLM orchestration frameworks, runtime monitoring & anomaly logging, basic model checking.

2022 - December 2024: **Automation QA Engineer** at Radiflow

- Developed, executed, and maintained comprehensive automated test suites for frontend, backend, and API validation across multiple environments, ensuring integration and validating services and database interactions.
- Collaborated on implementing CI/CD pipelines, managed test code using version control, and participated in code reviews to enhance code quality and deployment efficiency.
- Core tools & technologies: Playwright, Pytest, Postman, JUnit, Vitest, Jenkins, Git, Jira, Docker, Linux, Java, Spring Boot, MySQL, MongoDB.

Education

2019 – present: **Studying software engineering** at Afeka - Academic College of Engineering

- Experience in Cyber & AI: LTL/CTL formal verification, Z3 SMT solvers, Timed Automata, PyTorch CNNs, Monte Carlo uncertainty quantification, runtime anomaly monitoring, and OT security.
- Flag Projects: AI Agent Atlas (LLM orchestration), FlagAI (Large-scale models), and IntelliShop capstone (Python microservices, NoSQL, data orchestration, strict Security Manager).
- Advanced Coursework: Machine Learning, Parallel & Distributed Computing, Advanced Algorithms, Discrete Mathematics, Object-Oriented Design, Integrative Software Engineering.

2013 – 2016: **High school studies** at Handasaim Herzliya

- Full scale diploma, majored in physics, computer science and science engineering project (32 units).

Army Service

2017 – 2019: **Intelligence and Investigation Coordinator** in the Investigation Division

- Defined and operated advanced data collection tools (SW & HW). Monitored, and analyzed the data.
